

SEAMLESS CSRD-COMPLIANCE WITH R2C

YOUR KEY TO EFFICIENT AND AUDIT-PROOF SUSTAINABILITY
REPORTING

In a constantly changing regulatory environment, it can be challenging to fulfill the requirements of the Corporate Sustainability Reporting Directive (CSRD). Our new CSRD reporting module, fully integrated into R2C, is designed to simplify this process, reduce complexity and keep your organization one step ahead of regulatory requirements.

MAXIMISE YOUR COMPLIANCE & MINIMISE YOUR RISKS

Why our CSRD reporting module?

Our module goes beyond mere reporting: it **facilitates the assessment of double materiality**, a central aspect of CSRD, by taking into account all the necessary requirements of the European Sustainability Reporting Standards (ESRS). This is how it works:

Double materiality made easy

Our module includes a special risk type for IRO (Impact, Risks & Opportunities), which is fully configured according to ESRS specifications to accurately assess the internal and external impacts of your company. Whether it's financial risks or sustainability challenges, we have the solution.

- **Involving all stakeholders:** A dynamic questionnaire makes it possible to capture input from key internal and external stakeholders, creating a comprehensive materiality analysis.
- **Intelligent filters:** Non-relevant topics are filtered out after an initial evaluation, allowing you to focus on the essentials and use resources efficiently.

Tamper- and audit-proof documentation

Compliance is based on trust – and control. And control requires solid documentation. Our module ensures that every step of the materiality analysis is audit-proof and tamper-proof – with seamless documentation for audits. This not only ensures your compliance, but also gives you peace of mind.

- **Secure data processing:** Every assessment and piece of stakeholder input is stored in a tamper-proof manner to ensure data integrity.
- **Automated documentation:** Save time and reduce errors with automatically generated, auditable documentation for every materiality analysis.

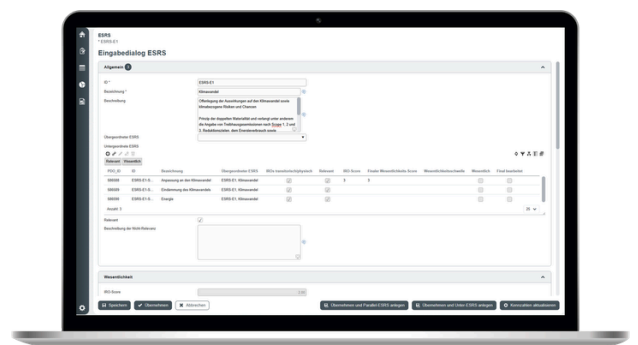

Efficient management of complex requirements

The CSRD sets high standards, but our module makes them manageable. We connect our application to the system of your choice via an interface, ensuring a seamless transition to data collection and filtering, as well as the preparation of greenhouse gas inventories, EU taxonomy reports and the final annual report.

- **Seamless integration:** Use the module on its own or in combination with our risk management solution for a holistic approach. On request, the results of the materiality analysis can be integrated into existing systems via an interface.
- **Increased efficiency:** By automating complex reporting, your teams can focus on value-adding tasks rather than dealing with regulatory details.

The CSRD requirements are complex, but with our integrated CSRD module, you can reduce risk, improve your sustainability practices, and create reports that not only comply with regulations but also add value for your company and stakeholders.

Ready to optimise your CSRD reporting? Our comprehensive and user-friendly solution helps you stay ahead of regulatory requirements.
